Art Unit

2879

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 November 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 and 16-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-4 and 16-23 is/are rejected.
- 7) ☒ Claim(s) 5, 6, 24 and 25 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
 - 2) ☐ Certified copies of the priority documents have been received in Application No. _____.
 - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. Applicant's amendment and remarks received 07 November 2005 have been entered and overcome the objections to the title and abstract.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 16-19, and 22-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Toyoda (JP 7-065706).
4. Regarding independent claim 1, Figure 1 of Toyoda shows a field emission device comprising a substrate (1); a cathode (P of Fig. 2) formed on the substrate; a gate insulating layer (3) formed above the substrate and having a well exposing a portion of the cathode; an electron emitter (2) formed on the exposed portion of the cathode; and a gate electrode (4) formed on the gate insulating layer and having a gate hole (4A) corresponding to the well, wherein the gate electrode further includes a cylindrical electrode part (4B) that is capable of forming a focusing electric field from the gate hole toward a proceeding path of an electron beam.
5. Regarding claim 2, Figure 1 of Toyoda shows the cylindrical electrode part being a Bellmouse shaped electrode part that broadens in the direction of propagation of the electron beam.

Art Unit: 2879

6. Regarding claim 16, Figure 1 of Toyoda shows the electron emitter including micro tips.

7. Regarding claim 17, Figure 1 of Toyoda shows the electron emitter including micro tips.

8. Regarding independent claim 18, Figure 1 of Toyoda shows a field emission device comprising a substrate (1); a cathode (52) formed on the substrate; a gate insulating layer (3) formed above the substrate and having a well exposing a portion of the cathode; an electron emitter (2) formed on the exposed portion of the cathode; and a gate electrode (4) formed on the gate insulating layer and having a gate hole (4A) corresponding to the well, wherein the gate electrode further includes a cylindrical electrode part (4B) having one end closer to the substrate that has a smaller radius and another end further from the substrate having a larger radius. The Examiner notes that where the structure recited in the reference is substantially identical to that of the claims, claimed properties or functions are presumed to be inherent (MPEP § 2112.01). Thus since Toyoda structure is substantially identical to that of the claims, the formation of a converging electric lens due to the application of an electric field is inherently present in the structure of Toyoda.

9. Regarding claim 19, Figure 1 of Toyoda shows the cylindrical electrode part being a Bellmouse shaped electrode part that broadens in the direction of propagation of the electron beam.

10. Regarding claim 22, Figure 1 of Toyoda shows the electron emitter including micro tips.

Art Unit: 2879

11. Regarding claim 23, Figure 1 of Toyoda shows the electron emitter including micro tips.

Claim Rejections - 35 USC § 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

14. Claims 3-4 and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toyoda (JP 7-065706) in view of Hsu (US 6,448,701).

15. Regarding claims 3-4 and 20-21, Toyoda teaches the limitations of the claimed invention, as discussed earlier, but fails to exemplify the electron emitter including carbon nanotubes.

Art Unit: 2879

16. Hsu teaches that it is known in the art to provide emitters including carbon nanotubes for reducing the operating voltage of the field emission device (col. 3, ln. 56-60).

17. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the field emission device of Toyoda with emitters including carbon nanotubes, as taught by Hsu, for improving the emission efficiency of the device.

Allowable Subject Matter

18. Claims 5-6 and 24-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

19. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record neither shows or suggests a field emission device comprising, in addition to the other limitations of the claim, a double gate electrode in which an additional gate electrode is formed beneath a gate electrode on which the cylindrical electrode part is to be formed.

Response to Arguments

20. Applicant's arguments filed 07 November 2005 have been fully considered but they are not persuasive.

21. In response to applicant's argument that Toyoda include a cylindrical part that forms a focusing electric field from the gate hole towards a proceeding path of an

electron beam, the Examiner notes that Figure 9 of Toyoda shows the gate electrode having a cylindrical part, as discussed earlier. Where the structure recited in the reference is substantially identical to that of the claims, claimed properties or functions are presumed to be inherent (MPEP § 2112.01). Thus since Toyoda structure is substantially identical to that of the claims, the formation of a focusing electric field from the gate hole towards a proceeding path of an electron beam is inherently present. The Examiner also notes that the device must be structurally distinguished from the prior art (MPEP § 2114).

22. In response to applicant's argument that Toyoda does not identify focusing the electron beam as a function provided by its device, the Examiner notes that the manner in which a claimed device is intended to be employed does not differentiate the device from the prior art if the prior art device teaches all the structural limitations of the claim (MPEP § 2114).

Conclusion

23. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

24. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 2879

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Quarterman whose telephone number is (571) 272-2461. The examiner can normally be reached on M-TH (7-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
